

# Career and job opportunities from the perspective of climate change

This exercise will help you reflect on your own field of study or discipline from a climate change perspective and the need for your sustainability expertise. Fill in the table below.

<b>Field or sector</b>  <i>What field are you studying? What industry and sector would you like to work in?</i>	<b>Employers</b>  <i>What companies and organisations do you know in your sector? Which employers are you interested in?</i>	<b>Roles and job positions</b>  <i>What typical roles and job positions do you identify in these companies and organisations?</i>	<b>The impact of the sector on climate change</b>  <i>How does the sector impact climate change? How is the sustainability transition already visible in the sector / practices?</i>	<b>The impact of climate change on the sector</b>  <i>How does climate change affect the sector? What kind of sustainability competencies do you need?</i>

## Finally, you can reflect on these questions to clarify your career goals:

- Who needs me and my skills?
- For whom do I want to create well-being?
- Where do I want to make an impact?
- What is meaningful to me?
- What kind of footprints or handprints am I leaving?
- How do I want to change the world?
